

Python Idioms Reference Index

This reference contains Python drawer patterns for Oracle-to-Pandas ETL and openpyxl Excel reporting work in MDCS. It is an index only; open the section drawer that matches the active implementation task.

Scope

- Modern `python-oracledb` Thin mode SELECT extraction into pandas.
- Memory-safe cursor fetching and DataFrame construction.
- openpyxl workbook, worksheet, table, and report formatting idioms.
- No generic Python algorithms, credentials, private schema names, or company data.

Consuming Procedures

- `procedures/report_generator/SKILL.md`

Sections

id	topic	open when
pandas_etl	Oracle Thin mode connections, SELECT execution, cursor fetching, DataFrame mapping, chunking, and safe type conversion	extracting Oracle data into pandas or normalizing database values
openpyxl_excel	Workbook creation, multi-sheet reports, DataFrame writes, styles, column sizing, freeze panes, filters, and number formats	building or formatting Excel reports with openpyxl
