title: Create Report Generator procedural closet.
epic: epic-dumb-copilot
status: ready
risk: low
allowed_areas:
- procedures/report_generator/
must_not_touch:
- tools/
- references/
requirements:
- Create the Report Generator procedural closet directory: `procedures/report_generator/`.
- Create `procedures/report_generator/SKILL.md`.
- Ensure the file has valid frontmatter containing all 10 canonical Aegis keys:
* `trigger`, `non_trigger`, `failure_modes_addressed`, `attention_signals`, `procedure`, `scope_boundary`, `composition_pointers`
- Ensure `reference_pointers` is a list of structured mappings, pointing to:
* `ref`: `python-idioms`, `section`: `pandas_etl`, `open_when`: `python script needs to query Oracle or load/map data to`
* `ref`: `python-idioms`, `section`: `openpyxl_excel`, `open_when`: `script needs to generate or apply formatting/styling`
- Write a step-by-step interactive prompt procedure (under 200 lines total).
- Ensure the `procedure` field in the frontmatter serves as a compact skeleton of the steps, and details of the analysis go into the
- The step-by-step prompt itself will:
1. **Persona & Context Bootstrapping**: Sets up Copilot's Senior Python Developer persona.
2. **Requirements Intake**: Prompts Copilot to request:
- The SQL query or compressed table schemas.
- The target Excel spreadsheet layout (sheets, headers, formatting preferences).
3. **Extraction & Transformation Code**: Directs Copilot to generate clean `oracledb` connection handling and Pandas mapping
4. **Spreadsheet Styling Code**: Directs Copilot to generate openpyxl styling blocks (colors, widths, borders).
5. **Error & Memory Handling**: Instructs Copilot to add connection block cleanups and type checking.
non_goals:
- Do not write concrete openpyxl or pandas formatting blocks directly in the closet `SKILL.md`. Use the reference drawers for this
acceptance_criteria:
- Running `python tools/validate_mdcs_library.py` executes successfully.
- The `SKILL.md` is strictly under 200 lines and contains all 10 keys.
- Pointers in `reference_pointers` are structured with `ref`, `section`, and `open_when` keys.
verification_commands:
- `python tools/validate_mdcs_library.py`
depends_on:
- MDCS-TICKET-005

Body

Goal

Create a lightweight procedural closet prompt that guides Copilot step-by-step to write Python scripts that load Oracle query results and format them in Excel.

Context

Generating spreadsheets is a core task. Copilot tends to write single large blocks of code without styling or with legacy database connection methods. The closet guides it through modular development: database extraction first, then dataframe manipulation, then spreadsheet styling.

Procedure

1. Create `procedures/report_generator/SKILL.md` with appropriate YAML frontmatter.
2. Draft the prompt sequence using clear tags.

3. Add reference pointers linking to the Python reference drawers.
4. Validate using the library validator.
